

Create Scene in Josh

- * Log into Josh.ai and select the Scenes page for the client
- * Create or Adjust an existing scene
 - * Cindev Recommends creating unique scenes for debug purposes
 - * Cindev Recommends ****hiding**** the scene from the user and using a special character like ****\ _**** to group all these special scenes together
- * Set your actions
- * Click on Triggers
 - * Move on to the Control4 Setup

Setup Josh Scene in Control4

- * Go to the driver properties page
- * Select the next available scene id from the Select Scene List (adjust Scene Triggers to add additional scenes ids)
- * Set the Scene Name to the scene name in Josh
- * Copy the Voice Trigger Value
 - * Paste this value into the Josh Scene Voice Trigger input
- * Do this for each Josh scene you want to trigger from Control4

To Trigger Josh Scene

- * From the Programming tab of Composer, find the event (when this happens, if this happens) and select it
- * On the right (Actions) side and select the driver Josh.ai Scene Trigger
 - * Select Trigger Scene
 - * Use the lookup and find the scene you wish to trigger
- * Insert this into the Event
