Wireless Doorbell Button

Axxess industries

OVERVIEW

The Axxess Wireless Doorbell Button is beautifully designed to welcome guests at your door. A press of the button wirelessly activates our chime relay or other configured devices.

Installation is simple. With a long lasting lithium battery there is no wiring necessary and its surface mount design means you have a choice between using two screws or the peel and stick adhesive strips.

Since the Axxess Doorbell Button communicates with the controller, doorbell rings can be turned off for pre- programmed events such as "baby asleep." Fully compatible with Control4.

Two external contacts enable detection of whether the door is closed and whether the deadbolt is engaged

Wireless Doorbell Button

USES

- Chime activation
- Multi-purpose button

WIRELESS

ZigBee PRO (802.15.4)
Control4 driver downloadable
