Personalized Room-Level Automation for Smart Homes

RoomMe Identifies who's in a room
by Smart Phones and automates
lights, temperature and other room
settings to the people in it.

ROOMME IS A COMBINATION OF AN INTELLIGENT OCCUPANCY SENSOR AND A MOBILE APP

The RoomMe Sensor knows who's in a room by tracking Smart Phones.

The RoomMe App then sets the Smart Devices in a room to the pre-defined preferences of the actual people in it.

It's like magic. Just enter a room, and:

Smart Lights

Turn on and set Color Tone and Dim Level to your preference. They might not, if there's someone sleeping! You can set different light settings by time of the day!

Smart Thermostats

Adjust temperature to your pre-defined comfort level. But it really depends on who's already in the room.

Smart Speakers

Start playing your favorite song. They can even follow-up with the song you were listening to in the previous room.

RoomMe works with your existing Smart Home Devices.

For a full list of currently supported devices and hubs, please go to:
roomme.intellithings.net/compatibility

Specifications:

- Diameter: 15.2cm / 6.1in
- Height: 4.5 cm / 1.77in
- Mounting: Ceiling, at room entrance
- Wireless: Bluetooth Low Energy
- Batteries: 2x Alkaline D Type (Not included)
- A minimum of two sensors is recommended.
- One Sensor* is required per room where room-level automation is required.
